

Hello Sir or Madame,

I am interested in applying for the Software Engineer position (Job 160466) listed on your website dated 25 April 2016. As a graduate student at New York University Tandon School of Engineering majoring in Computer Science, I believe both my education and my experience in computers are an excellent match with the responsibilities outlined in your job description.

My experience in working for Saavn LLC while pursuing my graduate studies as an ad solutions intern to build an ad statistics calculator has given me insight into the requisite skills needed to excel as a software engineer. I have also built information systems for Design Desk India, a Chennai based Start-up Company so that they can manage the raw data they produce from interviewing candidates. I am fluent with MongoDB and Nodejs as well, having used these tools to help build video editing tools for VidCode, a New York based startup which uses videos as a tool to teach teenagers how to code in JQuery. Finally, I gained an academic understanding of C++ working as a teaching assistant at New York University, grading assignments and handling recitations.

In addition to my technical skills, I perform well both independently and as part of a team. I communicate effectively with all levels of personnel, as reflected with my experience working with colleagues and mentors on the above-mentioned projects and the other projects and endeavors on my resume. I would greatly appreciate the chance to be a part of VISA Inc and look forward to the possibility of hearing from you to discuss open positions in further detail. In the meantime, I can be reached at +19292404475 or you can e-mail me at vs1416@nyu.edu.

Thank you for your time and consideration.
